
C whole Clutter app
A Clutter today · AWS
B adapter layer (B0 / B1 / B2)
1...n connector
one per target type
I connection
one company's linked account
new / extended
removed / not used
where B touches A

Fig 1 **Option 1 · Build B next to A** CHOSEN

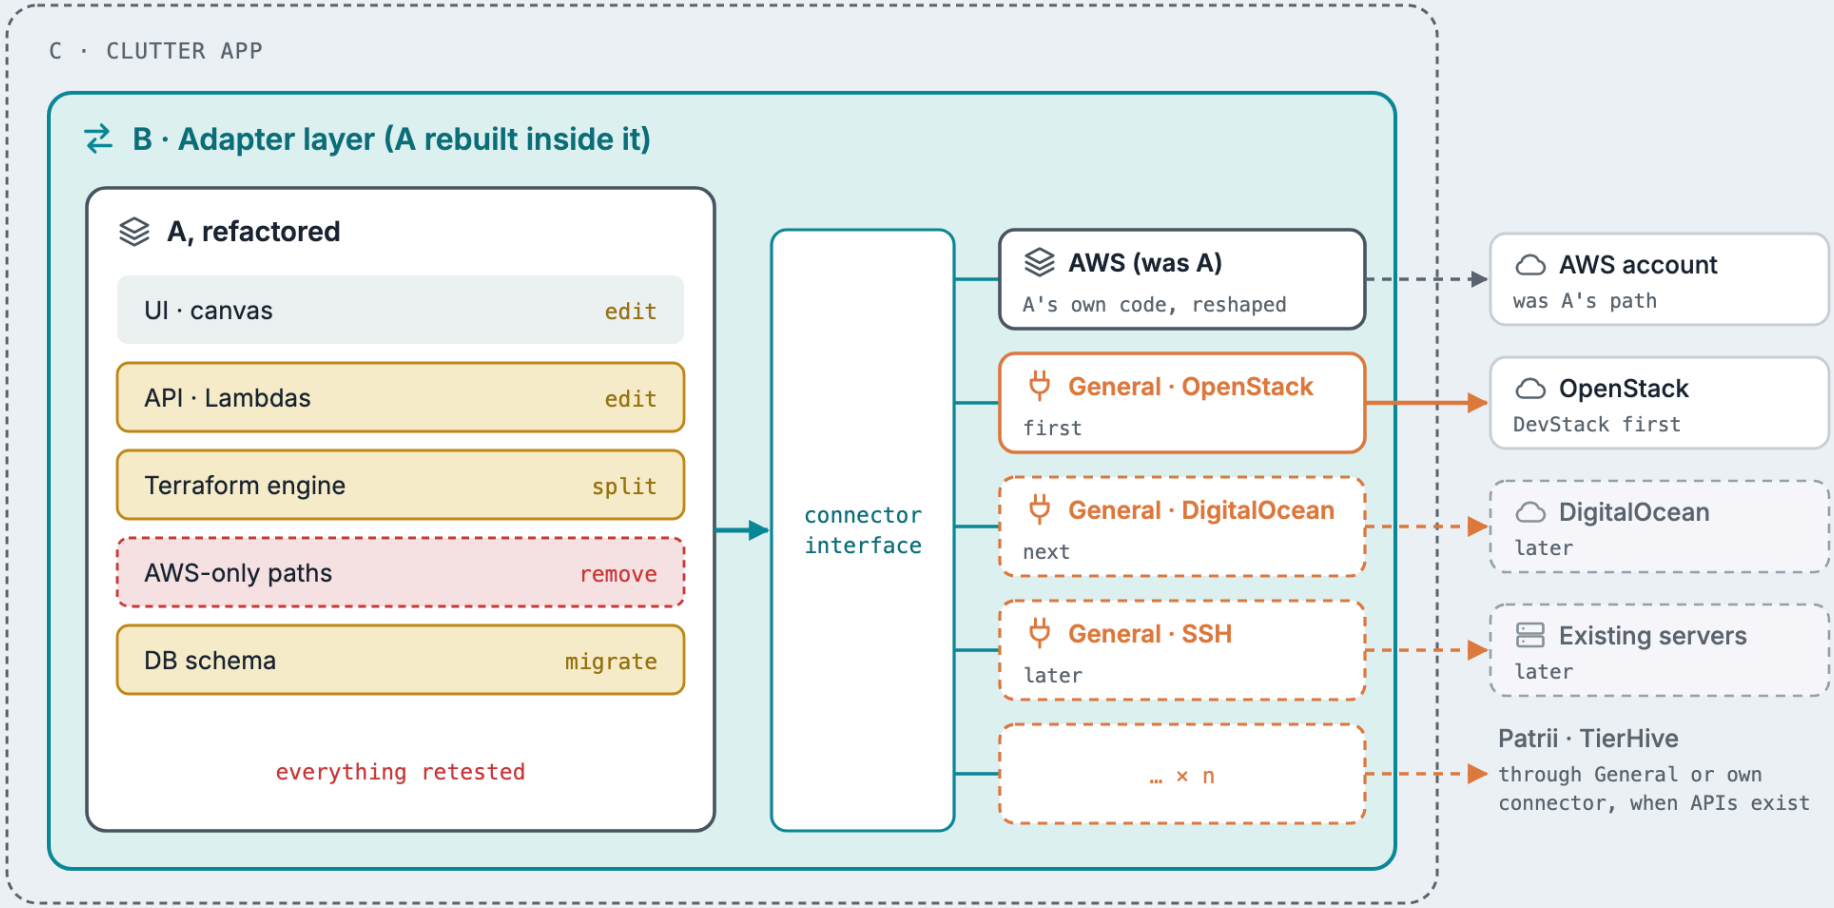

New building-block diagrams reach every cloud, AWS included, through B. A keeps serving existing AWS diagrams.

Fig 2 **Option 2 · B reuses parts of A** FALLBACK

Reuse beyond the named seams is the fallback, decided case by case (ADR-006). The connectors are the same as Option 1.

Fig 3 **Option 3 · Turn A into the adapter** LATER, PIECE BY PIECE

A later destination, reached piece by piece, never the first move (ADR-006). Each step retests every AWS path.

Fig 4 **One diagram, many deployments** B0 · users' own clouds

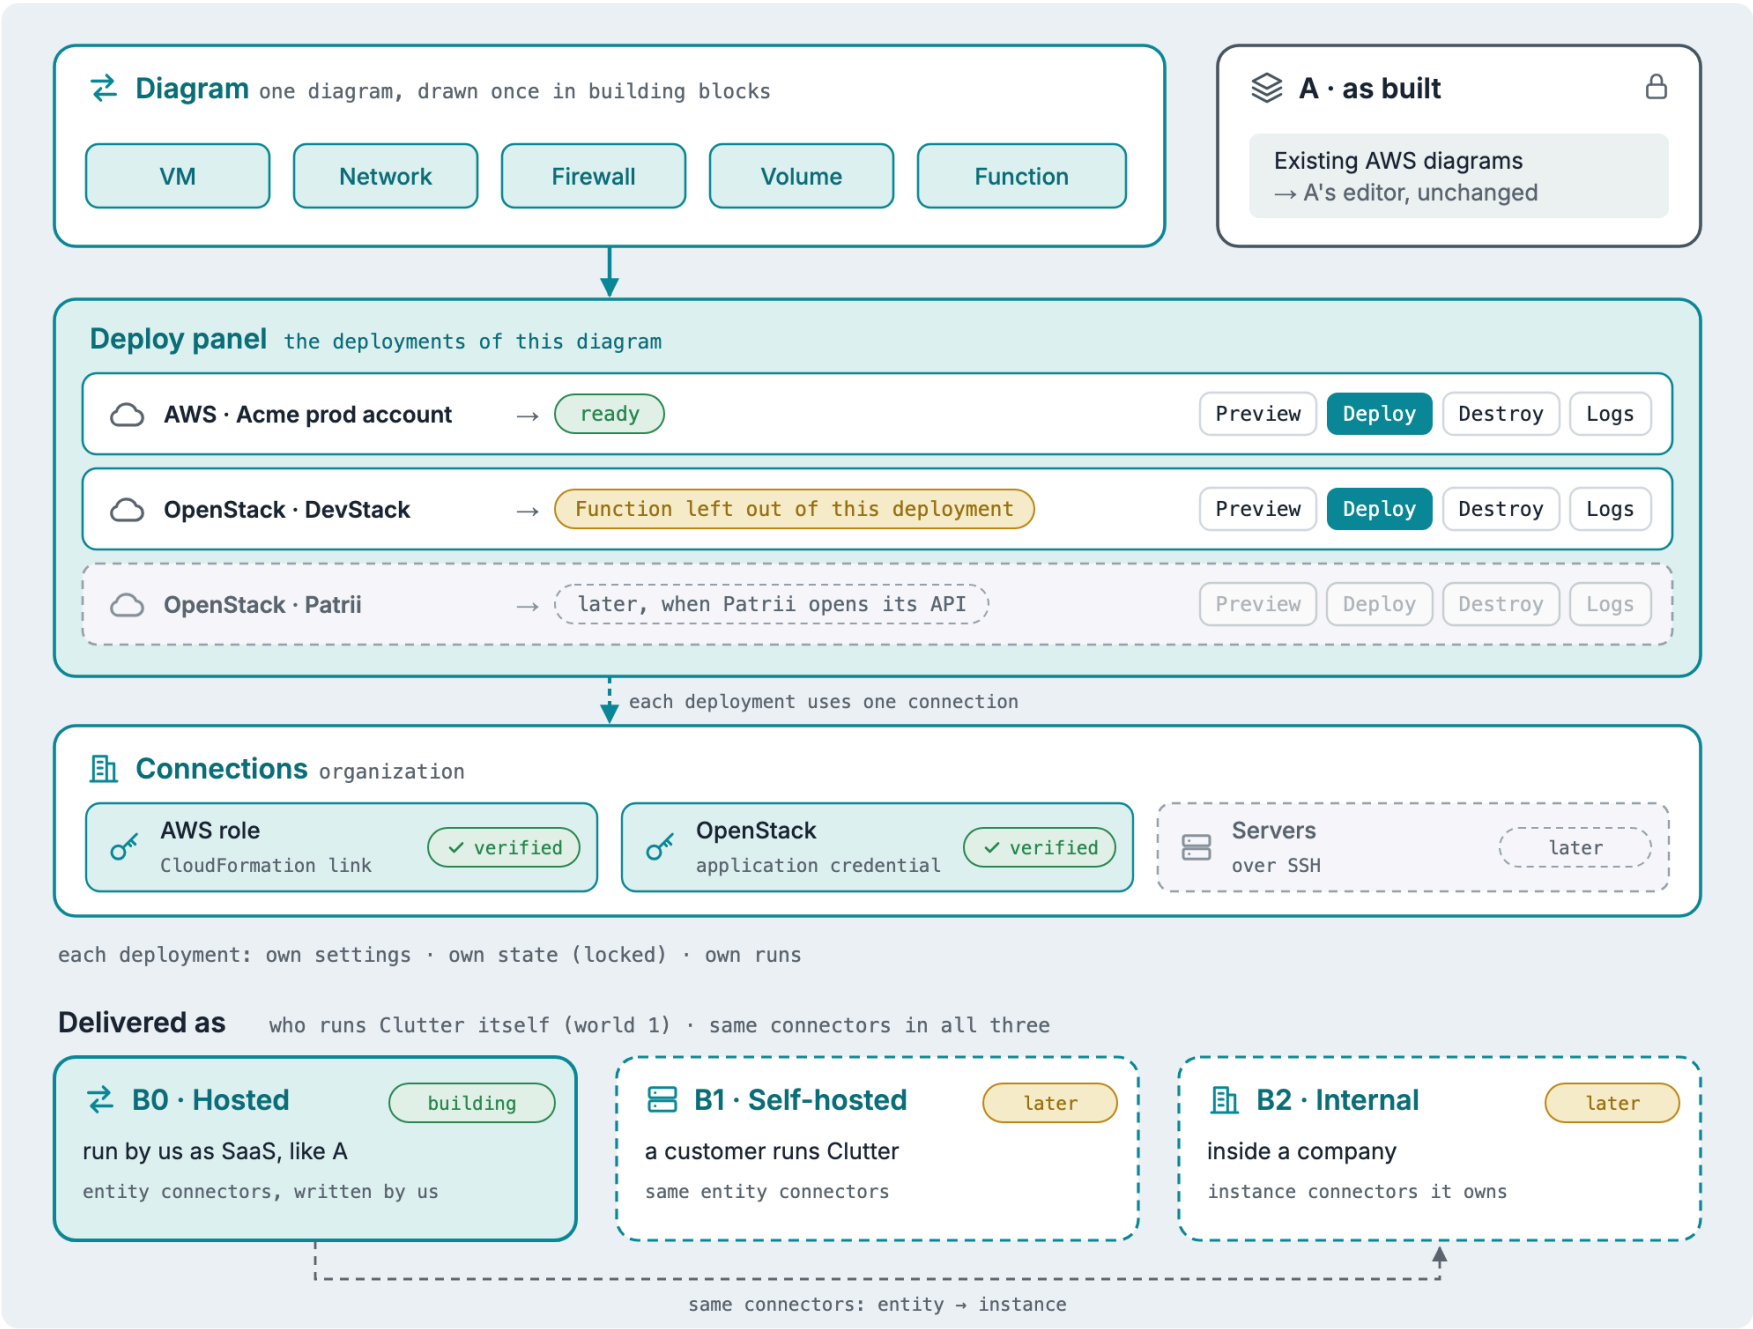

Fig 5 **Building blocks → connector → connection** Detail of B

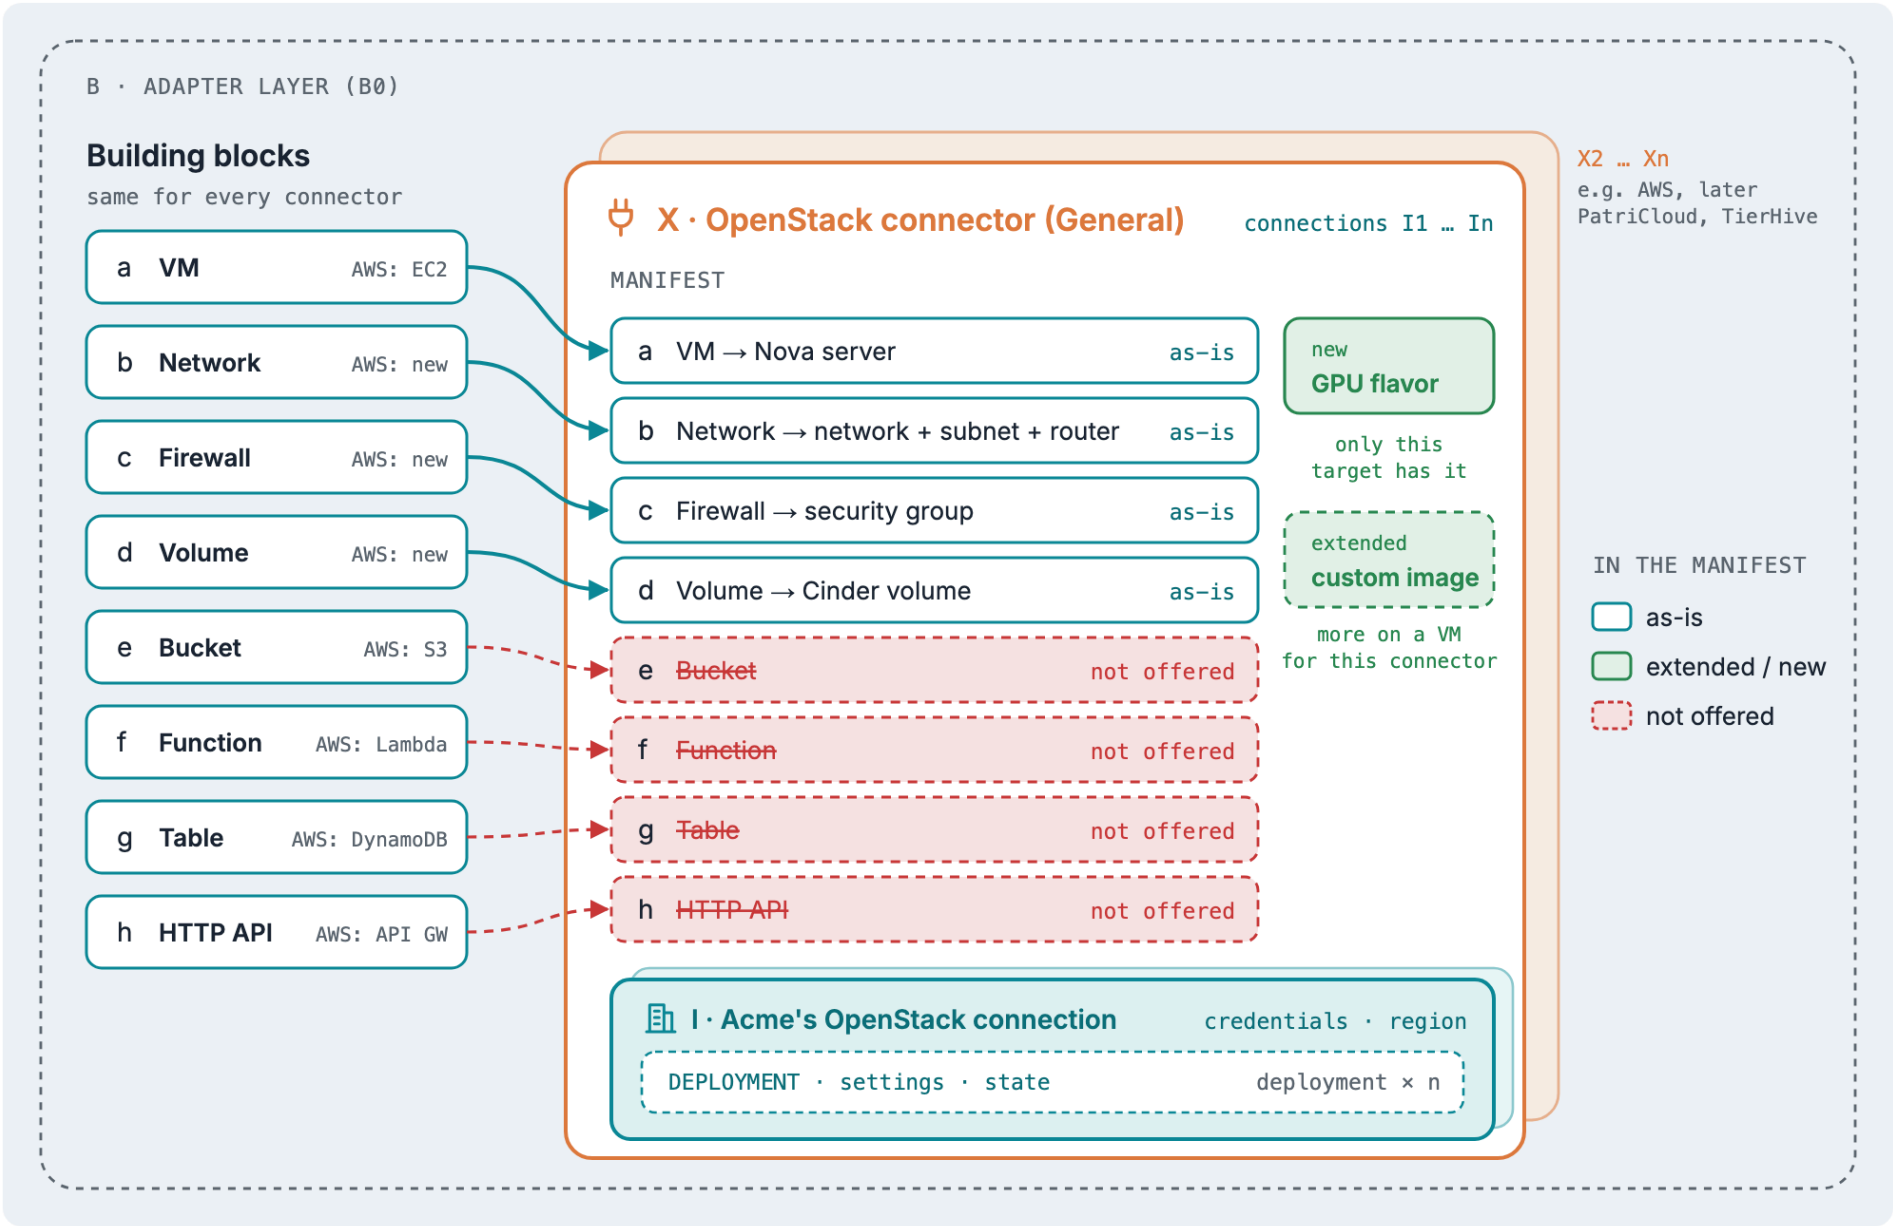

Fig 6 **System A today · Clutter on AWS** As built

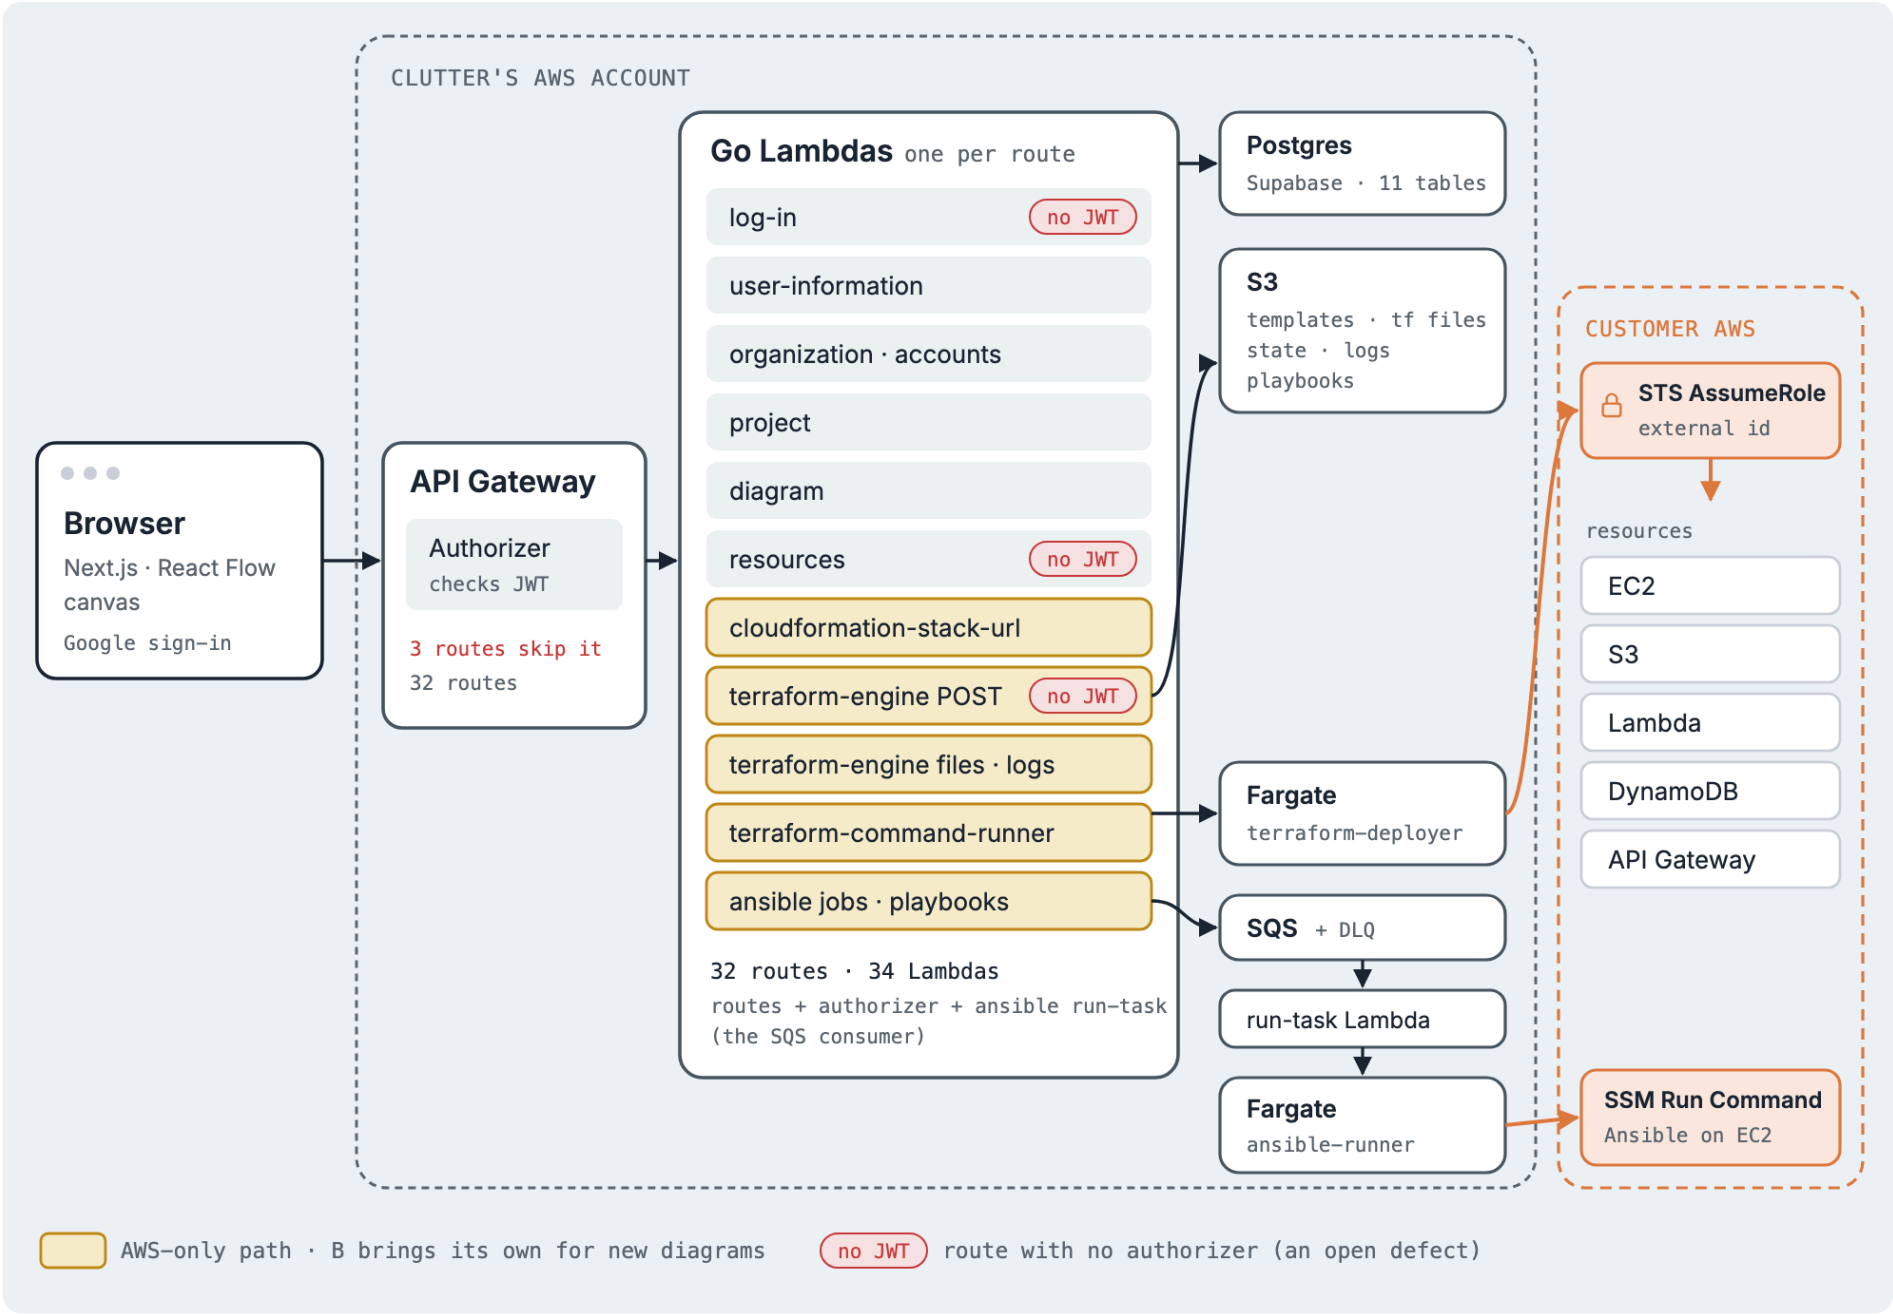

Fig 7 **System B · How the adapter layer works** Proposed · Option 1 + B0

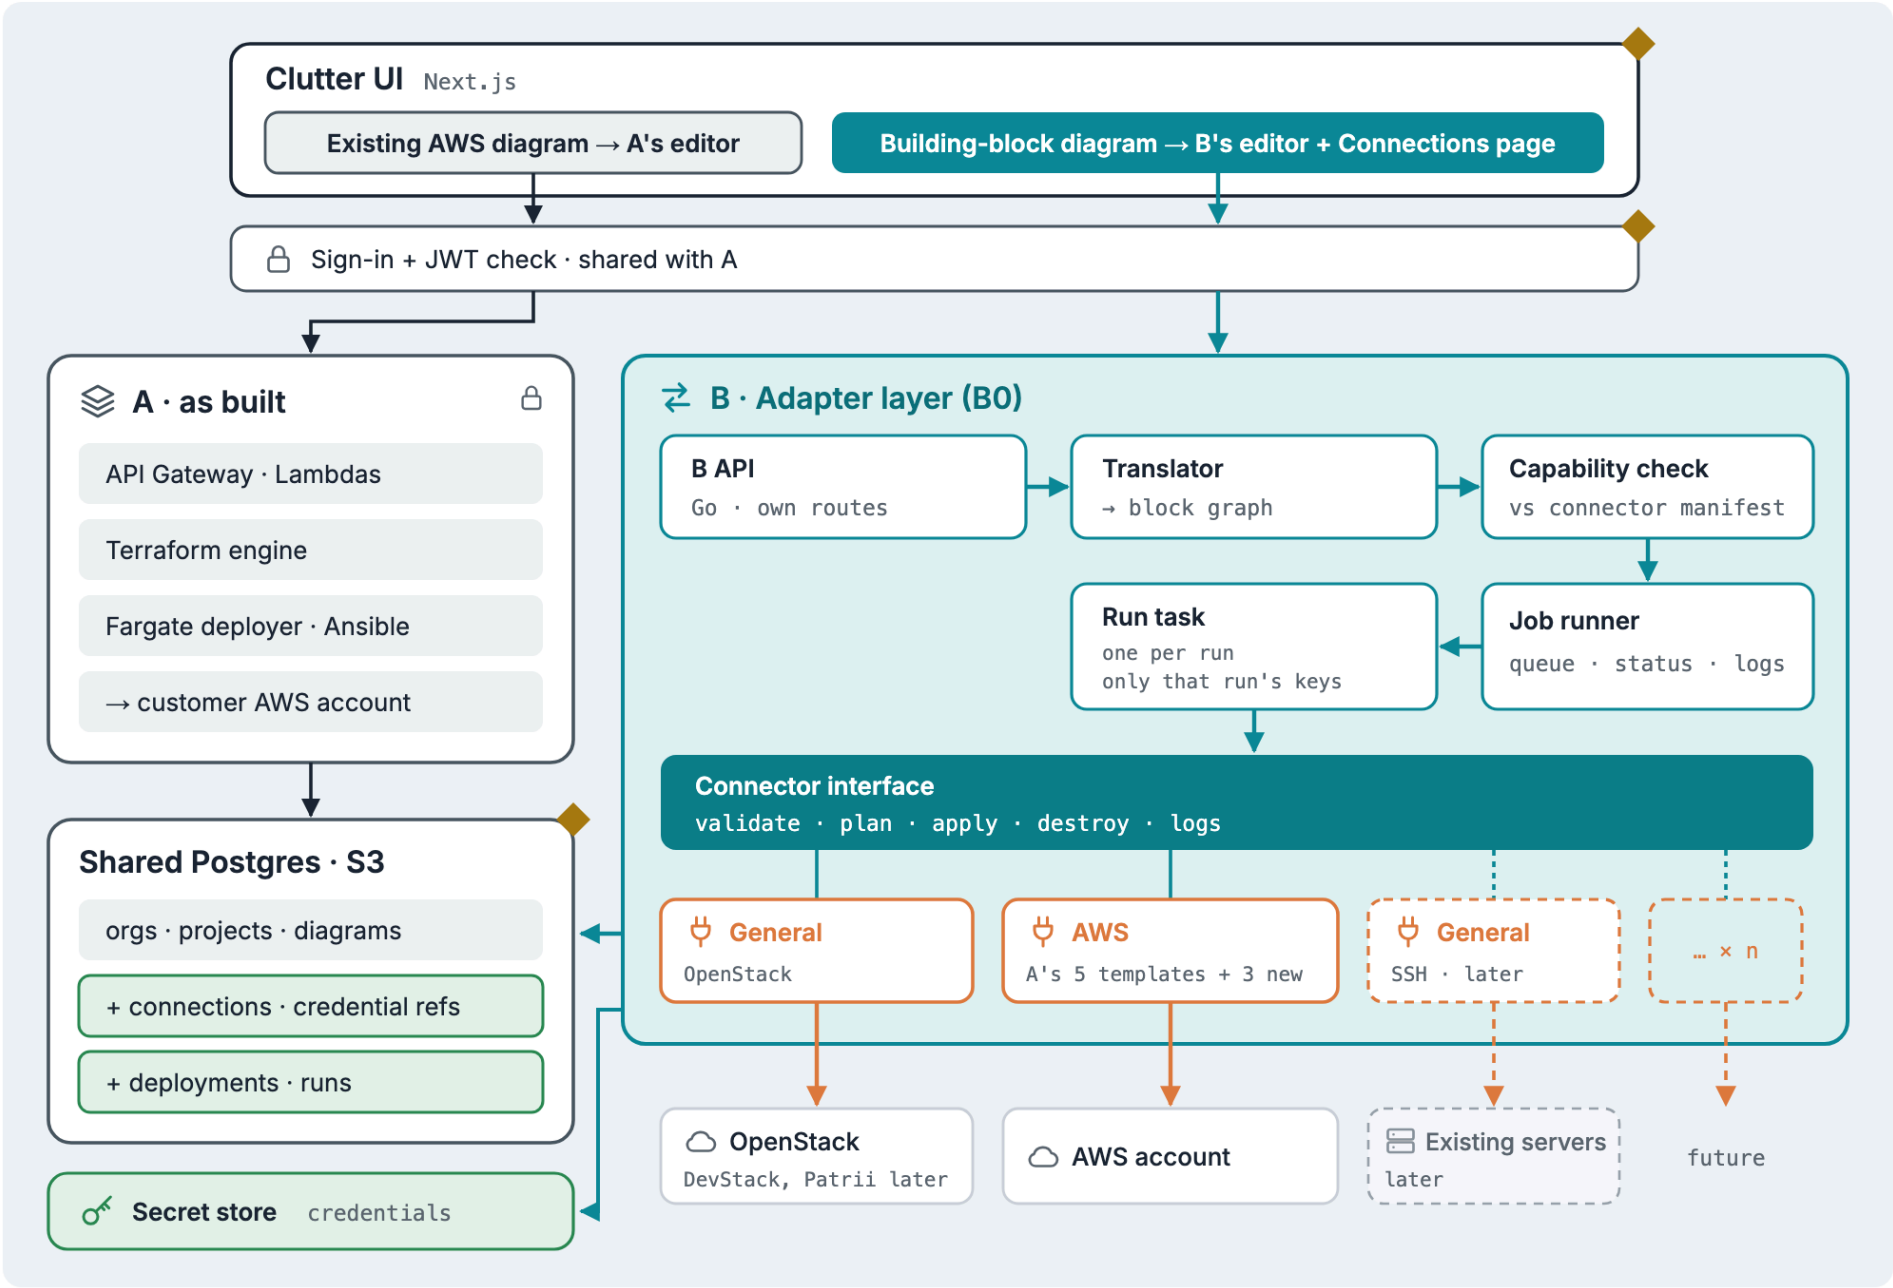

Fig 8 **One deploy through B, step by step** Proposed flow

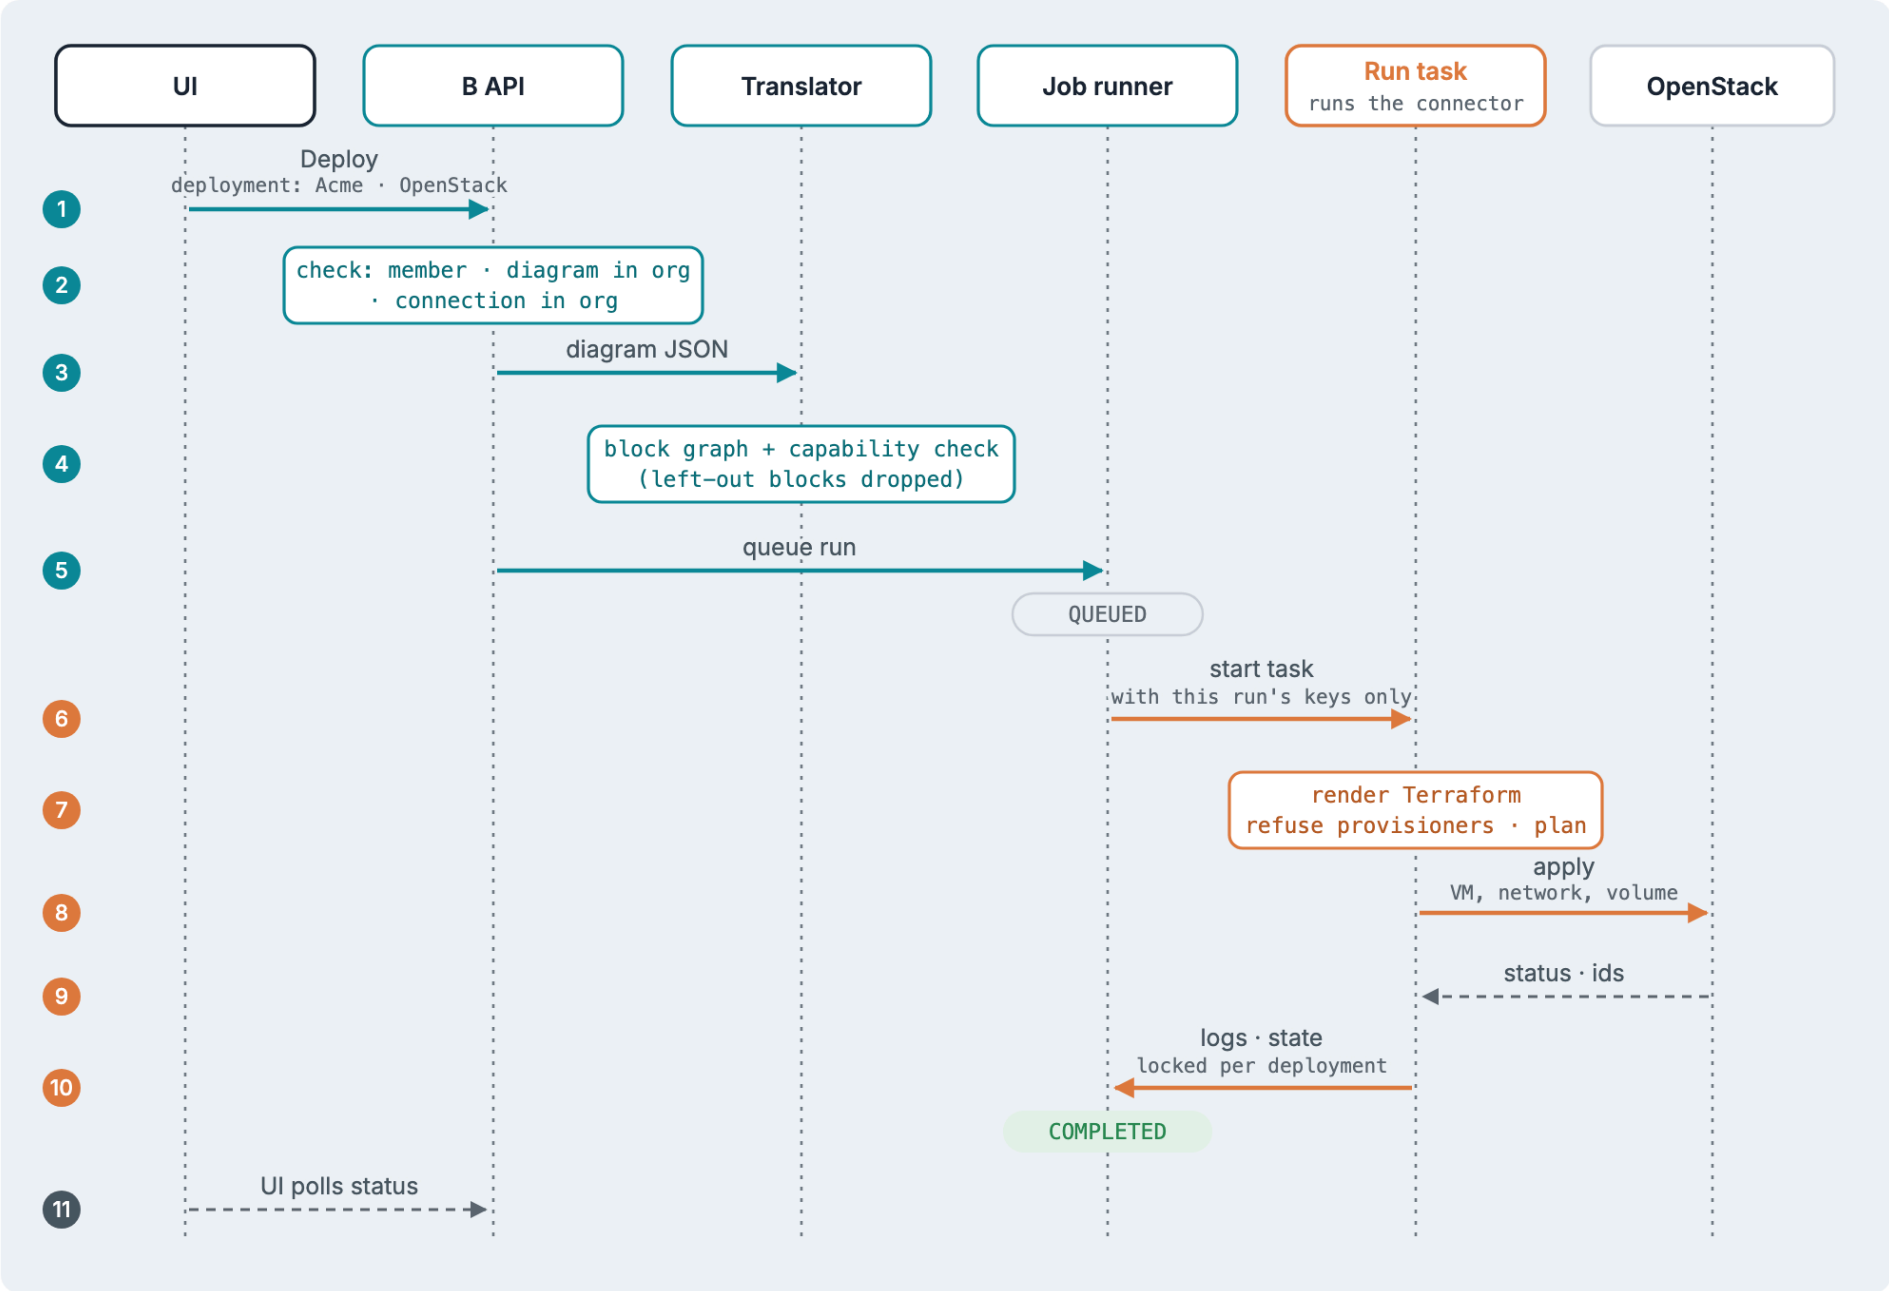

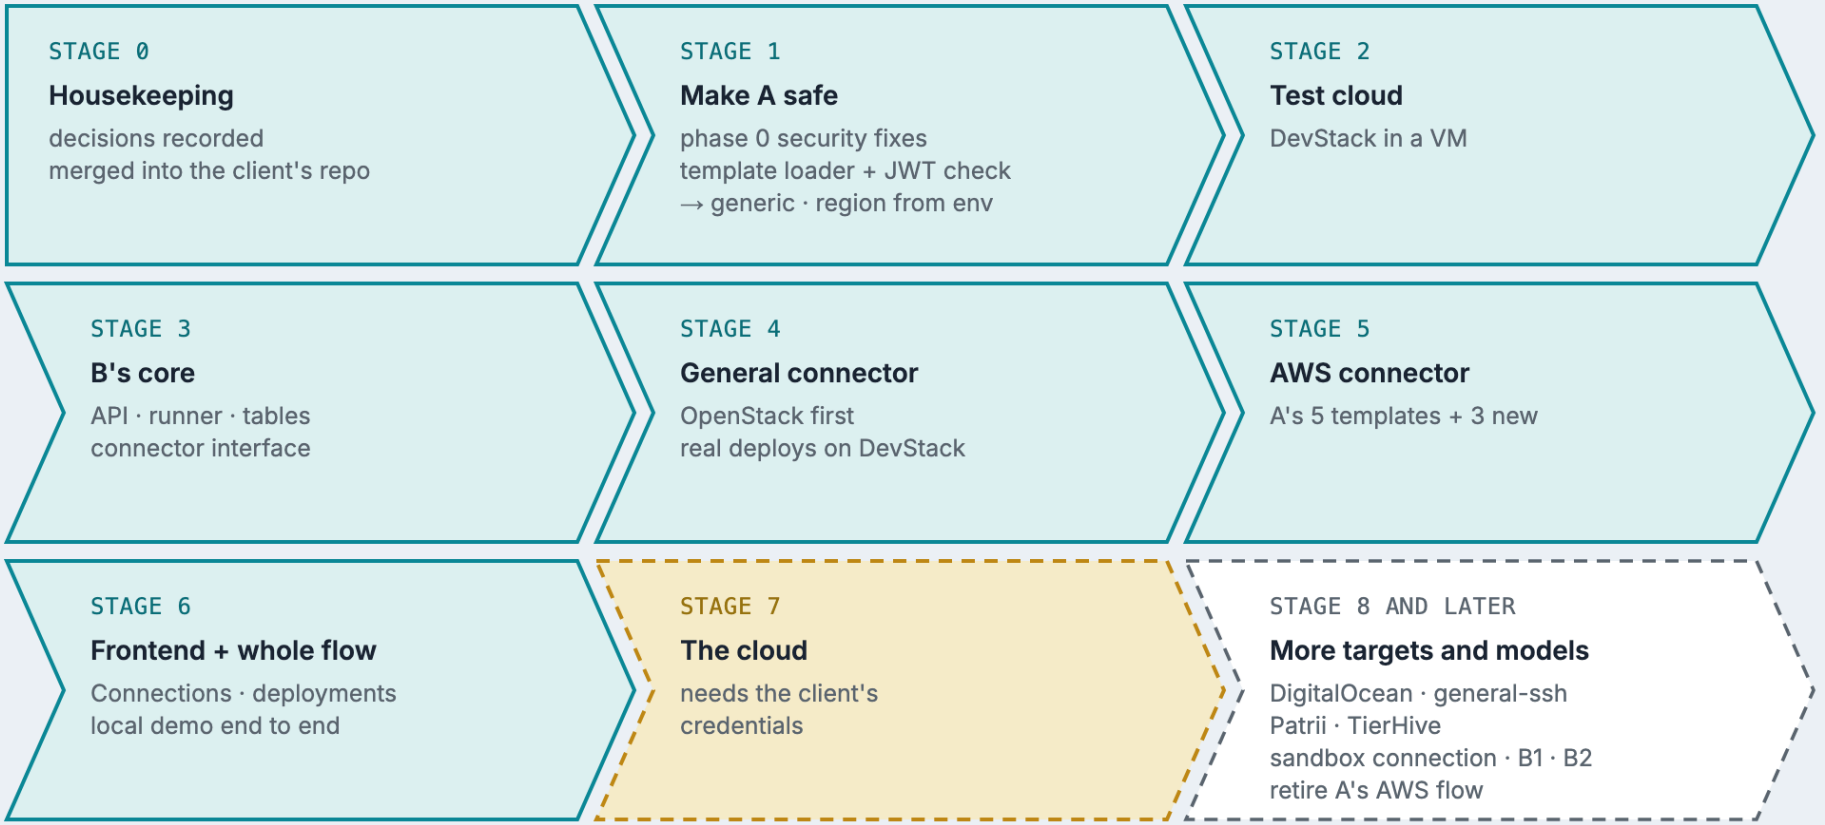

Fig 9 **Build order** Planned

● stages 1 to 6 run and test on a laptop
